

**Do you have to
comply with the
Corporate
Sustainability
Reporting
Directive ?**

**And how ELFIN Consulting
can support**

How does the CSRD affect your company?

Introduction

The new regulations regarding Corporate Sustainability Reporting Directive CSRD

The **CSRD** significantly changes how companies disclose sustainability efforts, requiring more detailed and standardized reporting for greater transparency and accountability.

It revises and strengthens the NFRD rules, aligning standards across the EU for easier comparison by stakeholders. Companies must report sustainability information using the European Sustainability Reporting Standards (ESRS) framework.

The CSRD will broaden the scope of companies covered by sustainability reporting and shift from voluntary to mandatory disclosure.

The directive transcends mere reporting; it entails comprehending impacts and the financial exposure linked to such impacts.

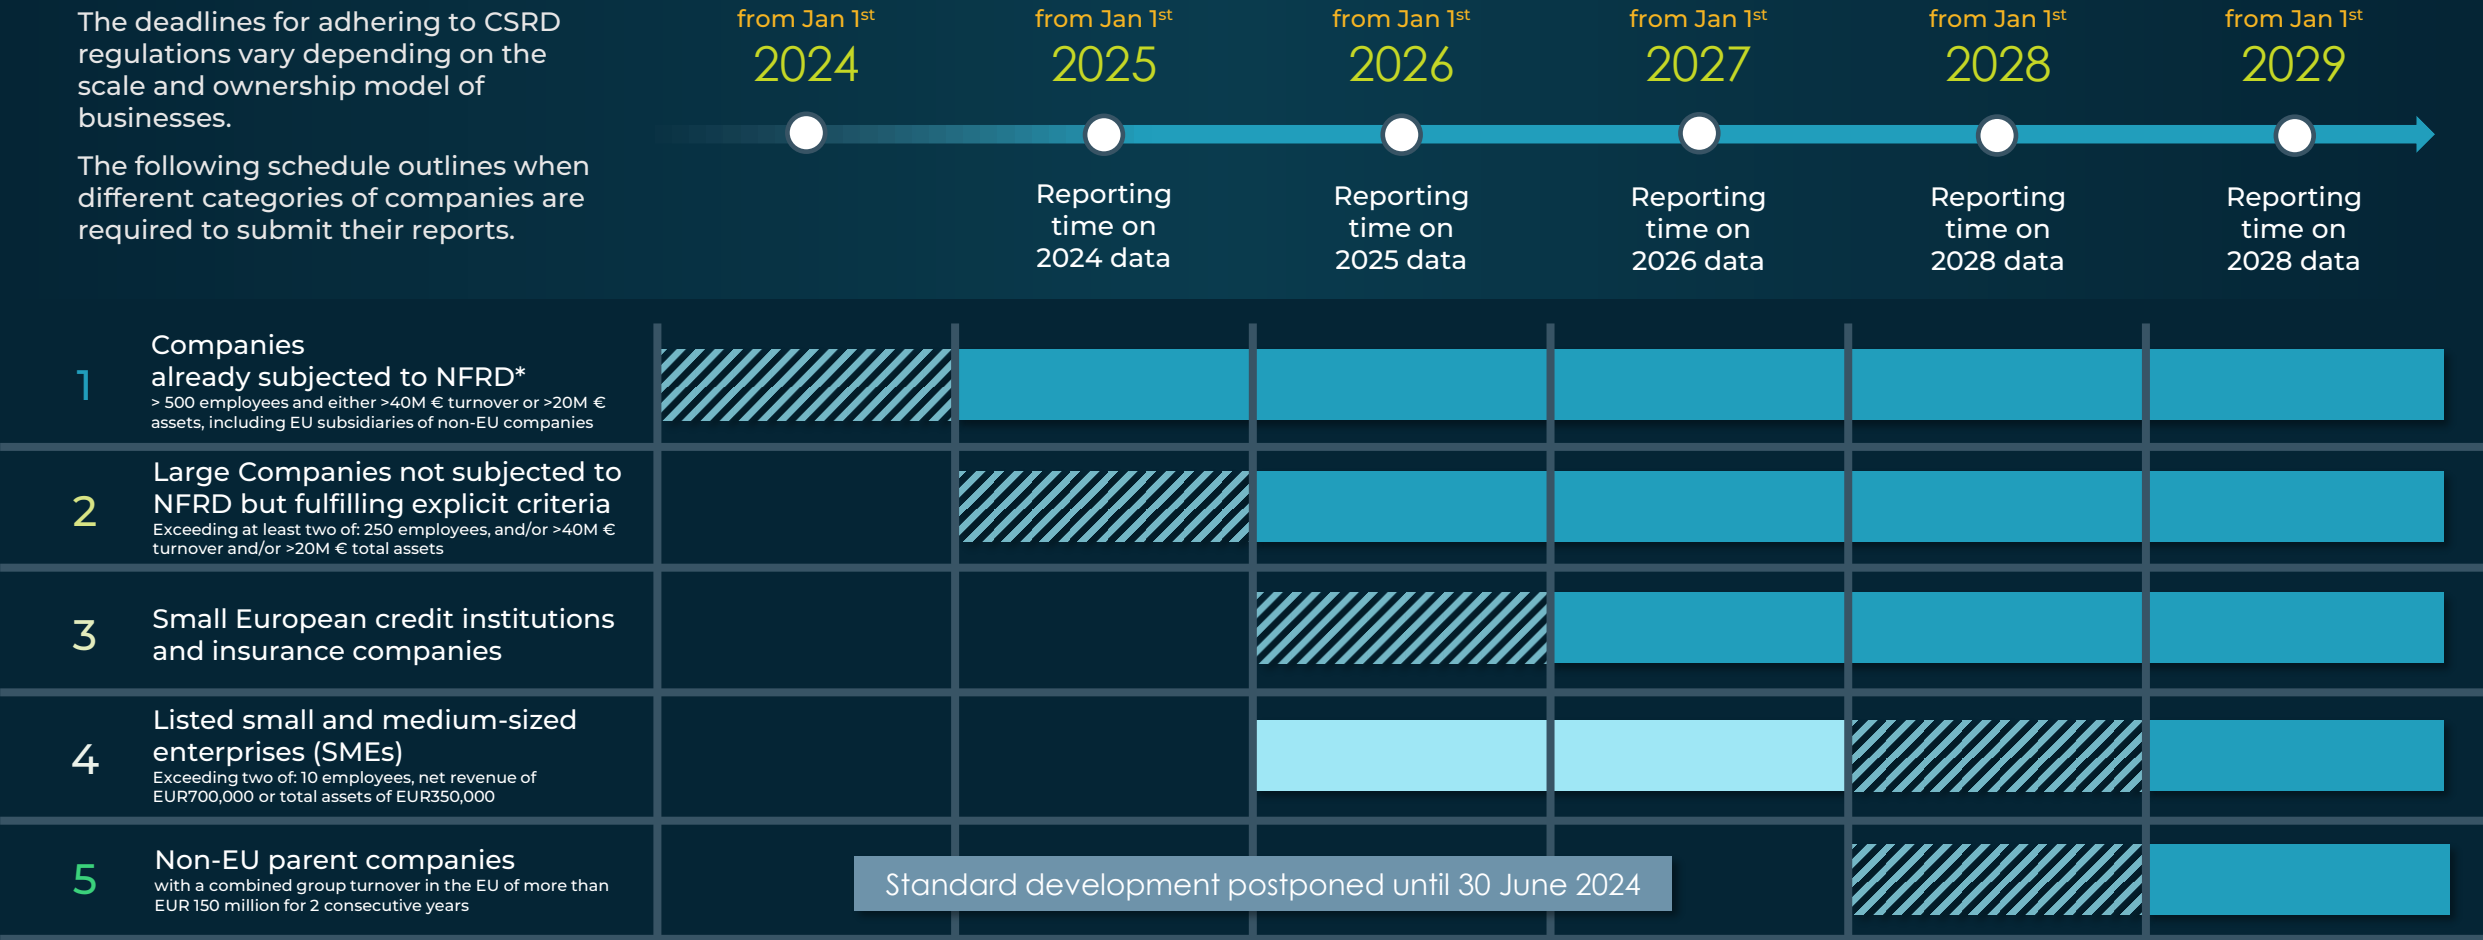

What is new in CSRD compared to the NFRD?

	NFRD <i>Non-Financial Reporting Directive</i>	CSRD <i>Corporate Sustainability Reporting Directive</i>
COMPANIES AFFECTED	11,600 Companies	About 50,000 Companies
REPORTING SCOPE	Environmental protection, social responsibility, human rights, anti-corruption and bribery, company board's diversity	General disclosures: Business model, targets and KPI, sustainability governance, double materiality assessment, due diligence, risk and opportunity management Topic-specific disclosures: Environmental (incl. EU taxonomy), social, governance and sector specific standards
REPORTING STANDARD	Recognized national, union-based or international frameworks	European Sustainability Reporting Standards (ESRS)
THIRD PARTY ASSURANCE	Non-mandatory (for most countries)	Mandatory
REPORT LOCATION	Part of management report or a stand-alone document	Dedicated section in management report

Timeline

The deadlines for adhering to CSRD regulations vary depending on the scale and ownership model of businesses.

The following schedule outlines when different categories of companies are required to submit their reports.

 = report  = gathering data  = voluntary reporting

*Non-financial Reporting Directive

Required action

Steps to be taken under CSRD

1 Scoping

Is our company subject to the CSRD? What is the extent of our reporting obligations concerning geographical reach and operational activities? Who do we need to involve in the reporting team and which resources are needed?

2 Materiality assessment

What are the critical sustainability issues regarding our company and industry? How do our operations affect people and the environment? Which issues pose significant financial risks or opportunities? Who are the key stakeholders requiring engagement?

3 Gap analysis

What sustainability topics must we include in our reporting? Which specific data points and parameters are relevant? What gaps exist concerning both mandatory and material topics? What data is readily available versus what needs to be acquired?

4 Data Management

Which KPIs should we identify to measure our progress? How can we establish lean data gathering processes? How can we harmonize sustainability data hubs? How can we integrate automated processing solutions into our data management system?

5 Reporting & communication

Who are our target audiences? How can we report in a meaningful way so that our key stakeholders easily have access to the information they need? What key messages do we want to convey, and how will we tailor our communication strategy accordingly?

6 Strategy & Business

How can we translate the learnings from our reporting efforts into our competitive advantage? How can we reshape business models and our portfolio to be future proof? Which sustainability projects can we include that align with our business goals?

support you?**

ELFIN services

CSRD & Data Management

Scoping

How do you approach CSRD requirements in your company?

- Understanding needs
- Roadmap development, incl. timeline and budget
- Composition of the reporting team

Double Materiality Assessment

What topics should you report on?

- Designing of (group-wide) double materiality assessment methodology and tool
- Training and guidance of (group) companies
- Development of a (group-wide) double materiality matrix

Gap Analysis

What reporting gaps do you have under these topics?

- Gap analysis for data points: Systematic comparison of disclosure requirements under ESRS and existing disclosures
- Gap analysis for data processes: Digital Landscape Assessment
- Creation of a tailored action plan

Data Management

How to assemble exactly the data you need?

- Setting realistic goals, identifying SMART metrics and KPIs where necessary
- Establishing lean data gathering processes
- Harmonizing sustainability data hubs and integrating automated processing solutions

Reporting & Communication

How to use your CSRD efforts for external communication?

- Designing report structure
- Content development, design of visuals and report layout
- Crafting communication strategies

Strategy & Business

How to use your CSRD efforts to gain competitive advantage?

- Portfolio and risk assessments based on identified gaps
- Review of company strategies, policies and business models
- Concept development and implementation of business-driven sustainability projects

We tailor our offer according to your needs and wishes.

We can support you with the whole package or assist at any stage of the process.

Why work with us?

The ELFIN spirit

Sustainable success, your way

We are proud to be good listeners! We are not offering you a one-size-fits-all solution, but we are working closely with you to understand existing structures and making changes as tailored and smooth as possible.

Dynamic international team

While we are strongly rooted in the German market our international experts put us in a unique position of handling international supply chains and teams. We foster a culture that puts people at the center of everything we do.

Sustainability & business experts

Our agile team brings together deep expertise in both business strategy and sustainability practices. By supporting clients across all functions, we break down silos between "sustainability" and "the business" - allowing our clients to drive meaningful environmental and social impact while capturing the financial upsides of leading sustainable practices.

Our references

Sustainability Reports & Materiality Assessments

Development of sustainability reports and conducting of materiality assessments for clients in various sectors, based on GRI and ESRS Standards

Our services

- Determining of the reporting scope
- Conceptualization and implementation of materiality assessment and stakeholder engagement
- Identification of reporting requirements and gap analysis
- Creation of reporting structure
- Development of a data collection approach
- Data collection and evaluation
- Writing of the report incl. guiding reporting team
- Guiding design agency
- Coordination with reporting standard and refinement of report based on recommendations
- Development of stakeholder-oriented key messages and communication approach

Our key results

- 14 Sustainability Reports based on GRI standards for 8 different clients
- Materiality matrices according to GRI and ESRS standards
- Stakeholder workshops and surveys

CSRD Readiness Kit

Mapping of materiality and development of digital landscape assessment for the product supply department of a multinational corporation

Our services

- Regulatory Assessment and stakeholder overview
- Benchmark analysis
- Pilot double materiality assessment for topics of water and biodiversity
- Collection of relevant sustainability data
- Digital landscape assessment: Mapping of IT Landscape, available data points, dependencies and interfaces as well as IT Stakeholders
- Alignment workshops
- Proactive change management

Our key results

- First CSRD analysis in the entire corporation
- CSRD roadmap incl. optimization potential

Sustainability Commitments & Monitoring

A set of focus areas and goals to improve, measure and track progress of the sustainability impacts at the end-consumer level

Our services:

- Baseline, progress tracking, reporting concept
- Analysis of sustainability impacts based on recognized (life-cycle) assessment models such as PestLCI 2.0, USEtox, and Cool Farm Tool (e.g., for carbon footprint of crops)
- Strategic positioning and integration of sustainability commitments in relevant functions
- Management of capacity building platform

Our key results:

- ISO LCA reports for documentation and scientific validation of baseline and progress tracking approaches
- Market research on competitor and benchmark landscape for commercial partnership options in key crops and countries
- Implementation of central database for sustainability data and visualization of KPIs for sustainability progress tracking and decision making.
